Taming Thermobimetals to Behave
Thursday, October 26, 2017

About: Doris Sung holds degrees from Princeton and Columbia University. She practices architecture in various cities across the U.S., while teaching at USC, SCI-Arc, University of Colorado, and the Catholic University of America.

In 1999, Doris founded DO|SU Studio Architecture, and she is the recipient of several notable awards, including the prestigious accolades of AIA Young-Designer-of-the-Year, ACSA Faculty Design Awards, the World Technology Award, and the [next idea] award from ARS Electronica. Currently, she is working on developing smart thermobimetals and other shape-memory alloys unfamiliar to architecture as potential "third" skins (the first is human flesh, the second clothing and the third architecture). Her TEDx talk on TED.com has now surpassed 1.1 million views.

Books:

Books listed above are available in the CCNY Architecture Library except where noted.
